Project Design Phase
Proposed Solution Template

Date	15 February 2025
Team ID	SWTID-2026-9795
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Current IT procurement lacks efficiency and automation for standard laptop orders. Requests can require manual configuration follow-up, creating delays, user frustration, and inefficient resource allocation.
2.	Idea / Solution description	Implement a ServiceNow Flow Designer workflow named “Standard laptop task”. When the Service Catalog request reaches the required approval, the flow creates a Catalog Task, sets the short description and description to “Laptop need to Configured”, assigns the task to the Hardware group, and uses the Approved state.
3.	Novelty / Uniqueness	The solution connects Service Catalog approval directly to automated task creation and Hardware assignment, reducing manual intervention and helping ensure configuration work is initiated promptly.
4.	Social Impact / Customer Satisfaction	Reduces user waiting time and manual follow-up, supports timely laptop configuration, improves resource utilization, and provides a more seamless procurement experience for users and the IT department.
5.	Business Model (Revenue Model)	This is an internal IT process-improvement solution rather than a direct revenue-generating product. Its value comes from reduced manual overhead, improved efficiency, and better utilization of IT resources.
6.	Scalability of the Solution	The workflow pattern can be reused for other standard IT procurement or Service Catalog requests by adapting the trigger, task details, and assignment group while keeping the same automation approach.
