ServiceNow Project Documentation

Standard Laptop Procurement Automation with Flow Designer

1. Introduction

 Project Title Streamlining IT Procurement Automating Standard Laptop Orders with Flow Designer

2. Project Overview

 Purpose Automate the standard laptop procurement workflow in ServiceNow so that after an approved service request a catalog task is automatically created and assigned to the Hardware team for configuration Features Service Catalog request approval handling Flow Designer trigger automatic Catalog Task creation short description and description updates Hardware assignment and status verification

3. Architecture

 ServiceNow Platform The solution is implemented within ServiceNow using the Service Catalog and Flow Designer The flow is configured to run as the System user Workflow A Service Catalog request triggers the flow After approval the flow creates a Catalog Task sets the laptop configuration description assigns the task to Hardware and records the approved state Data The workflow uses ServiceNow request Requested Item approval and Catalog Task records no separate MongoDB database is used

4. Setup Instructions

 Prerequisites Access to a ServiceNow instance with permission to configure Flow Designer Service Catalog items approvals and Catalog Tasks Installation Configuration Open ServiceNow → All → Flow Designer → create the Standard laptop task flow → add the Service Catalog trigger → add Create Catalog Task → map the Requested Item Record → set the required descriptions Assignment group as Hardware and Approval as Approved → save and activate

the flow

5. Folder Structure

 ServiceNow Configuration The project does not use a local clientserver folder structure The main configuration artifacts are the Standard Laptop Service Catalog item the Standard laptop task Flow Designer flow Requested Item records approval records and generated Catalog Task records

 Configuration Organization The Standard Laptop catalog item is connected to the created flow through the Process Engine configuration The workflow then operates on the related ServiceNow records

6. Running the Application

 To run the workflow open ServiceNow → Service Catalog → Hardware → Standard Laptop → Order Now Submit the request and monitor the order status After approval the configured flow creates the Catalog Task automatically

```
o Approval: Open the Request Number, go to the Approvers
section, and approve the request. o Task verification: Open the
Requested Item and then the Catalog Tasks section to verify the
updated short description and Hardware assignment.
```

7. API Documentation

 No custom REST or backend API endpoints are exposed by this project The automation is implemented using ServiceNow Flow Designer actions and native Service Catalog records

 The workflow operates on the Requested Item Approval and

Catalog Task records No custom request parameters or API response

formats were specified in the provided project materials 8

Authentication

 Authentication and authorization are handled by the ServiceNow platform and the users assigned accessroles The flow is configured to run as the

System user no custom token or session implementation is used in the project

9. User Interface

 The user-facing interface is the ServiceNow Service Catalog where users select Standard Laptop and choose Order Now Administrative interfaces include Flow Designer Maintain Items approval records and Catalog Task records

10. Testing

 Testing strategy Validate the end-to-end standard laptop request workflow by placing a Standard Laptop request checking the approval approving the request and verifying that the Catalog Task is created with the required short description description Approval value and Hardware assignment

11. Screenshots or Demo

 The project execution includes ServiceNow workflow screens for Flow

Designer configuration Standard Laptop ordering approval Requested

Item and Catalog Task verification No external demo link was specified in

the provided project materials 12 Known Issues

 No specific software defects were documented in the provided project materials

The workflow depends on the Standard Laptop catalog item approval state Flow

Designer activation and correct Hardware assignment configuration 13 Future

Enhancements

 Potential enhancements include extending the automation to additional laptop models adding notifications and SLA tracking improving exception handling and providing broader procurement reporting and monitoring
